## Harden Your Home's Interior with Flood-Resistant Interlocking PVC Wall and Ceiling Panels

Hurricane floodwater wreaks havoc on drywall — it swells, loses its strength, absorbs bacteria and chemicals, and becomes a breeding ground for mold in just 24 to 48 hours. Behind it, the insulation loses its effectiveness and your home's entire structure can weaken. In the end, it leads to expensive repairs and delays your return to normal.

Made from PVC, Trusscore Wall&CeilingBoard is a pre-finished, interlocking panel for interior walls and ceilings that's a perfect alternative to drywall for homes in hurricane-prone states.

### Trusscore® Wall&CeilingBoard™

Interlocking PVC panels for interior walls and ceiling

Available in 8, 10, 12, 14, 16, and 20ft lengths

Lightweight and low maintenance interior wall and ceiling panels that install with ease and provide a bright, clean finish in any space all while being waterproof and impact resistant.

- ▮ Available in white and gray
- ▮ Industry leading ½" thick panels with a unique internal truss design
- ▮ 16" wide panels match typical framing spacing
- ▮ Installs vertically or horizontally
- ▮ Lifetime warranty upon registration
- ▮ Class A fire rating (see page 2 for more information)

#### Installs with No Mud and No Mess

Pre-finished Trusscore panels weigh 40% less than drywall and — thanks to their pre-punched screw flange and tongue and groove interlocking system — can be installed four times faster with no special skills or tools required.

#### Installs as a Full or Half Wall

Trusscore panels can be installed from floor to ceiling for complete protection or up to four feet high to protect the bottom of your wall. Plus, you can use third-party PVC decorative trim and moldings to create an elevated finish.

#### Withstands Flooding Without Damage

Non-porous and antimicrobial Trusscore panels are 100% waterproof, install with a watertight seal, can withstand long-term exposure to flood water filled with bacteria and chemicals, and will never grow mold or mildew.

#### Requires No Repairs Post-Flood

After being exposed to contaminants in flood water, Trusscore panels can be cleaned and disinfected with soap and water or with high-strength chemical cleaners to return them to their original state. No replacement or patching is necessary.

INSTALLS  
**4x FASTER**  
THAN  
DRYWALL

# Trusscore Wall&CeilingBoard is the Trusted Choice for Interior Walls in **Flood-Prone Homes**

For homeowners in flood-prone areas, Trusscore offers unmatched protection and peace of mind.

### Peace of Mind

In the event of a flood or an evacuation, you won't have to worry about the prolonged exposure of flood water on your interior walls. With its watertight seal, Trusscore will protect your walls from water damage.

### Protection in No Time

Trusscore can be ordered from a local retailer and, since it's so easy to install, can be installed all throughout your home before a hurricane is in the forecast.

### Promptly Dry Your Space with Removable Panels

Trusscore panels can be easily removed from the wall if floodwater finds its way to your insulation or framing. After you've had time to dry out your space, you can re-install the Trusscore panels back where they belong.

### Put More Money in Your Pocket

Making an early investment in a floodproof product like Trusscore Wall&CeilingBoard helps you avoid the costly and time-consuming repairs involved with patching and replacing drywall in the future.

Trusscore Wall&CeilingBoard does not meet fire separation requirements for fire-rated assemblies. If a fire-rated wall assembly is specified by code, Trusscore Wall&CeilingBoard must be installed on top of a fire-resistant material like gypsum board, fire-retardant-treated wood, or steel.

Add Trusscore Wall&CeilingBoard to your  
home to combat Hurricane season!
